

## **GRAPHITE**

<b>DESCRIPTION</b>	Graphite is a fine, metallic grey to black coloured powder having a greasy feel and very low coefficient of friction. Chemically, it is the pure form of carbon.
<b>APPLICATION</b>	<p>Graphite is used as a torque reducer in directional or crooked holes employing any water based mud system.</p> <p>Torque reduction does not become significant until concentrations of 3 kg/m<sup>3</sup> are exceeded. The optimum concentration is in the range of 6-7 kg/m<sup>3</sup>.</p>
<b>HANDLING</b>	Graphite is added to the mud system through the mud mixing hopper. Because it is extremely fine, it is recommended that a dust mask and goggles be worn while the graphite is being mixed.
<b>WHMIS</b>	Not Controlled
<b>TDG</b>	Not Regulated
<b>PACKAGING</b>	50 lb sack

*NOTE: See disclaimer for supplier responsibility.*
