## CELLOPHANE

**DESCRIPTION** Clear multi-sized flakes of polycellulose, with an average size of 9.5mm (3/8") and a specific gravity of 1.0.

**APPLICATION** Cellophane is used to provide a sealing agent supplement to other lost circulation material in water based drilling muds.

It is also a basic additive in cement slurries, providing a matting effect in the control of losses. Typical rates of addition up to 2% wt. cement are used as a preventative measure.

**HANDLING** Mix into a viscous mud with agitation. Cellophane will not pass through the shaker screen. In order to maintain the Cellophane concentration in the mud the shale shaker must be by-passed. (By-passing the shaker could result in plugged jets).

For cement applications add the Cellophane to the cement slurry in the mix tub prior to displacement.

**WHMIS** Not controlled

**TDG** Not regulated

**PACKAGING** 25 lb paper sack

*NOTE: See disclaimer for supplier responsibility.*
